

Height of Kerbs

One day the respected Comrade **Kim Jong Un** visited the Fatherland Liberation War Martyrs Cemetery which was nearing completion.

While giving advice on how to add the finishing touches, he asked when the roads within the cemetery were to be paved. His next question was about the height of kerbs.

Hearing an official's reply, he said that the kerbs should be designed to be put about 20cm above the pavement.

Generally speaking, the kerb is the raised edge of a pavement or sidewalk which separates it from the road. So, it is normal for the kerb to be put higher than the pavement.

Kim Jong Un's advice on the height of the kerbs carried a deep meaning.

If this height was not set properly, visitors to the cemetery, particularly war veterans and other old persons who had performed meritorious wartime service, would feel inconvenient.

Officials were reminded of his principle of life: Prioritize the convenience of the people in any case.

Now realizing why he was so meticulous about such details, they felt how much he treasured his people.
