

Attitude to the Revolution

The following happened in mid-June Juche 110 (2021), when the Third Plenary Meeting of the Eighth Central Committee of the Workers' Party of Korea was held in the presence of the respected Comrade **Kim Jong Un**.

In his concluding speech he said: As I have often emphasized, I would like to make it clear once again; an official, who neglects and disregards science and technology and does not value scientific and technological talents, cannot be said to be faithful to the Party and they cannot make the revolution together with us.

All the participants in the meeting could not help feeling solemn at his noble intention that the view of science and technology and the attitude to scientists and technicians are the view of and attitude to the revolution and an expression of loyalty to the Party.

Then, he continued: What we badly need now are not raw and other materials and funds but the courage and practical ability with which to create something out of nothing by dint of innovation and development and realize our ideals and goals by regarding science and technology as our lifeline; officials should not hope for any luck, but believe in scientists and technicians and give fullest play to their loyalty, patriotism and creative ability so as to tide over the present difficulties.

All the participants were firmly determined to vigorously accelerate the building of a socialist power by dint of science and technology by giving full play to the spiritual strength of scientists and technicians.
