

Become a True Patriot

In the present advance for building a powerful socialist country, many scientists and technicians spare no efforts and wisdom for the hastening of the rosy future of national prosperity, displaying patriotic enthusiasm.

This reality is inconceivable separated from tender care of the peerlessly great man, who takes warm care of the scientists and technicians and leads them step by step to become true patriots to contribute to the building of the powerful socialist country.

One day in April Juche 105 (2016), the respected Comrade **Kim Jong Un** gave instructions that scientists and technicians should become true patriots before scientist and technician to add lustre to their life as true patriots, saying:

Without patriotism they can never achieve valuable successes conducive to national prosperity and development.

Become a true patriot before becoming a scientist or technician!

This reflected his wish that scientists and technicians should become true persons devoting their all to national prosperity.

Indeed, his expectation is an ideological and spiritual source that makes the hearts of the scientists and technicians burn with patriotism and an inexhaustible motive force, encouraging them to advance invariably on the road of research for the country and the people.
